

# NIKITA

New Delhi, India — officialnikita14@gmail.com — linkedin.com/in/nikita-chaurasia14 — github.com/Nikita-1414

## PROFESSIONAL SUMMARY

B.Tech IT student with hands-on experience in full-stack development and UX design. Proficient in Python, JavaScript, TypeScript, and Java with a strong foundation in Data Structures and Algorithms, OOP, DBMS, and REST API design. Experienced in building scalable MERN stack applications, integrating AI/ML capabilities, and delivering production-ready systems. Winner of 3+ hackathons with a proven ability to build and ship software under pressure.

## EDUCATION

|                                                                 |                              |
|-----------------------------------------------------------------|------------------------------|
| <b>B.Tech – Information Technology</b>                          | 2024 – 2027                  |
| MAIT, Guru Gobind Singh Indraprastha University (GGSIPU), Delhi | CGPA: 8.4 / 10 (up to Sem 5) |
| <b>Diploma – Medical Electronics Engineering</b>                | 2019 – 2022                  |
| Kasturba Institute of Technology, Delhi                         | 77%                          |
| <b>Class X – CBSE</b>                                           | 2019                         |
| Govt. Sarvodaya Kanya Vidyalaya, Sultanpuri, Delhi              | 71%                          |

## TECHNICAL SKILLS

**Programming Languages:** Python, Java, JavaScript (JS), TypeScript, C  
**Web & Frontend:** HTML, CSS, React.js, Next.js, Figma (Wireframing & Prototyping)  
**Backend & Databases:** Node.js, Express.js, REST API, RESTful APIs, MongoDB, MySQL, Firebase  
**AI / Data Science:** Machine Learning, Data Analysis, TF-IDF, Cosine Similarity, Automation, API Integration  
**Core CS Concepts:** Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, Authentication & Security, SDLC, Agile, Debugging  
**Tools & Platforms:** Git, GitHub, Figma, VS Code, Postman, Linux

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                     |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                      |          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>AI Recipe Platform – AI-Powered Cooking Assistant</b>                                                                                                                                                                                                                                                                                                             |          |
| <ul style="list-style-type: none"><li>Built a full-stack AI recipe platform using Next.js, Strapi 5 CMS, and Google Gemini API for intelligent recipe generation and pantry-based ingredient detection.</li><li>Implemented freemium subscription model, recipe bookmarking, PDF export, and Arcjet-based rate limiting for security and abuse prevention.</li></ul> |          |
| <b>Movie Recommendation System – Content-Based Recommendation Engine</b>                                                                                                                                                                                                                                                                                             | [GitHub] |
| <ul style="list-style-type: none"><li>Developed a content-based recommendation engine using Python, FastAPI, and Streamlit with TF-IDF vectorization and cosine similarity algorithms.</li><li>Integrated TMDb REST API for real-time movie metadata retrieval (posters, ratings, descriptions), demonstrating practical API integration skills.</li></ul>           |          |
| <b>EventSphere – Full Stack Event Booking Platform</b>                                                                                                                                                                                                                                                                                                               | [GitHub] |
| <ul style="list-style-type: none"><li>Built a MERN-based event booking system with JWT authentication, bcrypt password security, and email OTP verification using Nodemailer.</li><li>Implemented role-based admin controls, booking approval workflows, seat validation, and an analytics dashboard for administrators.</li></ul>                                   |          |

## CERTIFICATIONS

- MERN Stack with DSA** – Apna College
- Machine Learning** – Samsung Innovation Campus 2025

## ACHIEVEMENTS & ACTIVITIES

- Winner in 3+ Hackathons** – Built innovative software solutions under time-constrained competitive environments, demonstrating problem-solving, teamwork, and rapid development skills.
- Actively practice **Data Structures and Algorithms** on LeetCode, strengthening problem-solving and algorithmic thinking for technical assessments.
- Contributor to **open-source projects** on GitHub; engaged in competitive programming and tech community activities.
- Areas of interest: Artificial Intelligence & Machine Learning, Automation & Intelligent Monitoring, Space Technology Applications.
